History

The Basics

For more than ten years our goal has been to make the very best audio and video cables and other related fine products to satisfy even the most demanding audiophiles from all over the world.

Today *FADEL ART* is without any doubt one of the leading companies in the world when it comes to high technology products for accurate music reproduction. Our slogan „*FADEL ART Products* - The Perfect Connection“ stands for our work and for the judgement of our products by the most critical music lovers.

FADEL ART presents really outstanding high technology audio products which are the results of many years of intensive research as well as of extensive musical studies.

The Person behind the products

The person behind the *FADEL ART* products is the physicist and mathematician Jean M. Fadel born in 1946 in Quezzane, Marokko. After getting his degree for teaching of mathematics he carried out this profession for nine years at the High School in Rabat, Marokko and for the next seven years he was working in the electronic industry in France where he was the director of the quality control department of a company specialized on the production of magnetic coils and of materials based on iron powders. From 1982 to 1992 Jean M. Fadel had different positions inside the world-famous electronic group Thomson. In the beginning he was responsible inside the military division of Thomson for the prestigious project RITA, an integrated network for the telecommunications inside the space industry, and finally he was responsible for the department „New Products“ inside the military division of the group Thomson. During his industrial career Jean M. Fadel acquired special knowledge in the field of magnetic phenomena and in the field of the production of components based on iron powders as well as a comprehensive know-how in the field of the physical calculation and the realization of customized applications. He was building up a special department for the use of carbon-iron powders for power applications inside a French electronic company - and at that time these activities were worldwide the first of its nature. He also did the research and he performed the industrial realization of special coils for the military project RITA and he developed also a special carbo-iron powder for that application. Furthermore it should be mentioned that Jean M. Fadel also acquired some patents like a patent for a special transformer with windings in the form of printed circuits for power handling at high frequencies and like a patent for a special device for the winding of micro-coils.

The Company

In 1987 Jean M. Fadel started his working on the development of corrected cables for accurate music reproduction, based on the mathematic equitations of the British scientist Heaveside. These developments are identified by the use of special carbon-iron particles with a defined structure. Encouraged by the results of his studies Jean M. Fadel founded in 1993 his own company „*Fadel Art Products*“. From the begining it was the goal to design cables which are phase and impedance corrected and which therefore are individually optimized for their specific use.

It was also the goal of the new founded company to design audio and video cables for all the related applications and for the final result ot achieve an accurate music reproduction.

As a consequence the company *FADEL ART Products* has developed a complete range of cables and related accessories like speaker cables, interconnect cables phono cables, digital cables, power cords and video cables. In addition *FADEL ART* has developed also other high technology products which are related to electromagnetic technologies like correction interfaces, multiple power outlets, power conditioners and as very special product a completely passive preamplifier of the highest possible quality.

In 1995 the company made a further step by the co-operation between the two persons Jean M. Fadel from France and Kurt W. Hecker from Germany. In this co-operation Jean M. Fadel is responsible for the technical area, which means research and production, and Kurt W. Hecker is responsible for the commercial area, which means sales and marketing.

The Future

In the course of the common European market *FADEL ART* is well prepared by its organization which is a French-German co-operation and which is multi-national orientated. In order to emphasize this philosophy we have just now installed our two co-operating divisions which are the *FADEL ART* TECHNOLOGY situated in France, responsible for all the technical aspects, and the *FADEL ART* MARKETING situated in Germany, responsible for all the commercial aspects.

It is also our goal to have a strong and international operating network for our business which meets the requirements for our long term orientated success in the future. Within this concept our international distributors are a real part of our activities, they are not only our customers but also they are our very important partners.
