

ROKSAN

TWO STAGE MICRO FIBRE RECORD CLEANER

ANALOGUE

Thank you for purchasing the Roksan Two Stage Micro Fibre Record Cleaner. Please read all operating instructions carefully before use.

In order to get the most out of your records, they need to be clean. Clean records sound better, track better, and last longer.

Since the stylus itself cleans the contact area of the groove, only a high quality non-abrasive and most importantly, a 'dry' record cleaning brush is required.

The Roksan Two Stage Micro Fibre Record Cleaner provides optimum cleaning of your record's surface and groove.

The front brush ensures general cleaning of the record surface and the groove while the rear brush cleans the remaining dirt.

Never use cleaning fluid or expose the fibres to liquid as this can permanently damage your Roksan Record Cleaner and your record/cartridge.

Only use record cleaning fluids when the fluid is fully removed or dried by a dedicated record cleaning machine, otherwise your stylus and your records may permanently get damaged.

Replaceable Micro Fibre
Brush Elements.

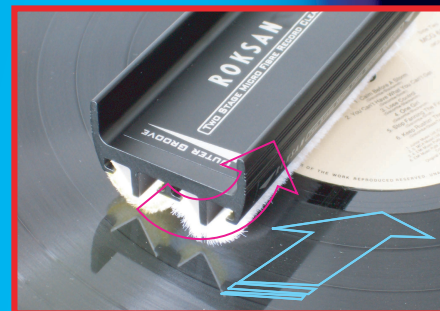

Made In England

Operation

After placing the record on the record player, gently place the record cleaner as shown on the rotating record and after a couple of revolutions, gently move it towards the centre. You can also rotate the handle such that the yellow fibre would be the last to contact the record surface.

Please note not to apply too much pressure otherwise the record player platter would stop rotating.

You can also clean the record either by placing it on a smooth, soft and non-abrasive surface or by carefully holding it in one hand while you move the cleaner over the record surface in a direction similar to a rotating record.

Specifications

Cleaning Element: _____ Two Stage Micro Fibre
Fibre Element: _____ 2mm Dense & 4.5mm Open
Replaceable
